DETAILED ACTION

1. The preliminary amendment A, filed on 7/27/01 has been fully considered and entered into the application.
2. Claims 1-38 are currently pending in this application.

Please Note: In an effort to enhance communication with our customers and reduce processing time, a dedicated Fax machine is in place to receive your responses. The Fax number is 703-308-4315. A Fax cover sheet is attached to this Office Action for your convenience. We encourage your participation in this Pilot program. If you have any questions or suggestions please contact Andrew Wang, Supervisory Patent Examiner at andrew.wang@uspto.gov or 7(703)306-3217. Thank you in advance for allowing us to enhance our customer service. Please limit the use of this dedicated Fax number to responses to Written Restrictions.

Election/Restriction

3. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22 and 29-31, drawn to a screening method for identifying in a library of potential domains from a biological source, a polypeptide binding domain or domains that bind to target epitope or family of target epitopes, classified in class 435, subclass 5.

Art Unit: 1639

- II. Claims 23-28, drawn to a method to determine the representation of expressed sequences in a PBD display sublibrary, when said PBDs are from a known protein and specific antibodies for epitopes of the known protein are available, classified in class 435, subclass 7.1.
- III. Claims 32-38, drawn to a method of identifying peptides participating in protein-protein interactions by screening a first peptide library for members that interact with a second peptide display library, classified in class 435, subclass 69.1.

4. The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I-III are drawn to three different patentably distinct methods. These group inventions are distinct and are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

Thus restriction between the groups is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Even though some of the groups are classified in the same class/subclass, this has no effect on the non-patent literature search. Different groups would require completely different searches in non-patent databases, and there is no exception that the searches would be co-extensive. Therefore, these do not create an undo search burden, and restriction for examination purposes as indicated is proper.

Art Unit: 1639

6. This application contains claims directed to the following patentably distinct species of the claimed invention:

If Group I is elected, Applicants are required to elect a single species for each of the following:

- a) a single species of potential binding domains (PBDs);
- b) a single species of target epitope or family of target epitope;
- c) a single species of gene encoding capsid protein;
- d) a single integer of 'n';
- e) length of cDNA molecules;

If group II is elected, applicants are requested to elect a single species for each of the following;

- a) specific antibodies;
- b) biological source;
- c) PBDs.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1639

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CAR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CAR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CAR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CAR 1.48(b) and by the fee required under 37 CAR 1.17(I).

Art Unit: 1639

9. Applicant is required to reply to this restriction requirement within 30 days of mailing this action. See MPEP 809.2(a).
